

LTTA

The LTTA was organised by Lithuania organisation VSI INOPRO and it was devoted to Renewable Energy Sources and our collective awareness of the necessity of introducing green measures into our lives. Stakeholders met in Kaunas to benefit from workshops and meetings with local eco-educators.

Over the three days we participated in several activities connected with the idea of green issues. On the first day we had a tour on organisation learning the scope of its activities and after that every country presented their organisations. We also did presentation on green energy sources.

All the partner organizations will make their own presentations (desk research) about the renewable energy sources in our countries. Following that Lesson Bites and Green Activity programme was shown as it was implemented in our respective organisations.

On the following days we participated in a workshop on case study connected with green energy and recycling. We also participated in problem solving discussion on “Energy advocates within our communities”. On the last day, we took part in a very informative visit and lecture in Recycling plant in Kaunas . The meeting was finished with a satisfaction surveys, farewell dinner and Certification Ceremony.
